TASK 01

Payment Management System

C# Console Application

Description

Your task is to build a simple **Payment Management System** using a C# Console Application. The app should allow users to make payments using different payment methods and view their payment history.

Payment Methods

- Credit Card
- PayPal
- Cash

Main Menu

```
==================================
 PAYMENT MANAGEMENT SYSTEM
==================================

1. Make a Payment
2. View Payment History
3. Exit

Choose an option:
```

1. Make a Payment

The user should be able to choose a payment method, enter the amount, and see the result of the payment.

```
---------- MAKE A PAYMENT ----------

Available Payment Methods:

1. Credit Card
2. PayPal
3. Cash

Choose payment method: 1

Enter amount: 500

--------------------------------------
Payment completed successfully!
Amount: 500.00 EGP
Payment Method: Credit Card
Transaction ID: TXN-1001
--------------------------------------
```

2. View Payment History

The user should be able to see all payment transactions made while the app is running.

```
------------ PAYMENT HISTORY -------------

Transaction ID Method Amount
------------------------------------------
TXN-1001 Credit Card 500.00 EGP
TXN-1002 PayPal 250.00 EGP
TXN-1003 Cash 100.00 EGP

Total Transactions: 3
```

Requirements

- The user can make payments using the available payment methods.
- Each payment should have its own transaction details.
- The app should keep track of payment history while it is running.
- The app should handle invalid inputs, such as entering text instead of an amount or choosing an unavailable option.
- The app should keep running until the user chooses to exit.

What to Submit

- The complete source code.
- A short README explaining how to run the project.
- Be ready to explain your code and the decisions you made while building it.

> **Note:** You can choose how to organize your code. Focus on solving the problem and making sure everything works correctly.

Deadline: 18-10-2026
